A digital innovator shows how

we can thrive in the new technological age. When Cathy Davidson and Duke University gave free iPods to the freshman class in 2003, critics said they were wasting their money. Yet when students in practically every discipline invented academic uses for their music players, suddenly the idea could be seen in a new light-as an innovative way to turn learning on its head. This radical experiment is at the heart of Davidson's inspiring new book. Using cutting-edge research on the brain, she shows how "attention blindness" has produced one of our society's greatest challenges: while we've all acknowledged the great changes of the digital age, most of us still toil in schools and workplaces designed for the last century. Davidson introduces us to visionaries whose groundbreaking ideas-from schools with curriculums built around video games to companies that train workers using virtual environments-will open the doors to new ways of working and learning. A lively hybrid of Thomas Friedman and Norman Doidge, *Now You See It* is a refreshingly optimistic argument for a bold embrace of our connected, collaborative future.

English universities have an exceptional influence on schools - a striking theme of the book. This important book first investigates the university as an institution and then tracks the individual on their journey to and through university. In *A University Education*, David Willetts presents a compelling case for the ongoing importance of the university, both as one of the great institutions of modern society and as a transformational experience for the individual. The book also makes illuminating comparisons with higher education in other countries, especially the US and Germany. Drawing on his experience as UK Minister for Universities and Science from 2010 to 2014, the author offers a powerful account of the value of higher education and the case for more expansion. He covers controversial issues in which he was involved from access for disadvantaged students to the introduction of £9,000 fees. The final section addresses some of the big questions for the future, such as the relationship between universities and business, especially in promoting innovation.. He argues that the two great contemporary trends of globalisation and technological innovation will both change the university significantly. This is an authoritative account of English universities setting them for the first time in their new legal and regulatory framework.

Human Capital and Development Jul 26 2022

During recent decades, Korea has been one of only a handful of countries that have made the successful transformation to become a developed nation by simultaneously achieving persistent economic growth combined with a democratic political system. Experts and political leaders worldwide have attributed this achievement to investments in people or, in other words, the power of education. Whilst numerous books have highlighted the role of industrial policies, technological growth, and international trade in Korea's development process, this is one of the first to focus on the role of human capital. It shows how the accumulation of human capital aided transformation and helps explain the policies, strategies and challenges that Korea faces now and in the future.

Samsung Rising Dec 19 2021
*** Longlisted for the 2020 Financial Times & McKinsey Business Book of the Year ***
'Shines an incisive and entertaining light into the secretive world of the South Korean technology giant shaping our digital lives in ways we probably can't imagine' -- Brad Stone
Can the Asian giant beat Apple? Based on years of reporting on Samsung for the Economist, the Wall Street Journal, and Time from his base in South Korea, and his countless sources inside and outside the company, Geoffrey Cain offers the first deep look behind the curtains of the biggest company nobody knows. How has this happened? Forty years

ago, Samsung was a rickety Korean agricultural conglomerate that produced sugar, paper, and fertilizer. But with the rise of the PC revolution, Chairman Lee Byung-chul came up with an incredibly risky multimillion dollar plan to make Samsung a major supplier of computer chips. Lee had been wowed by a young Steve Jobs who sat down with the chairman to offer his advice, and Lee quickly became obsessed with creating a tech empire. Today, Samsung employs over 350,000 people - over four times as many as Apple - and their revenues have grown 40 times their 1987 level. Samsung alone now make up more than 20% of South Korea's exports and sells more smartphones than any other company in the world. And furthermore, they don't just make their own phones, but are one of Apple's chief supplier on technology critical to the iPhone. Yet their disastrous recall of the Galaxy Note 7, with numerous reports of phones spontaneously bursting into flames, reveals the dangers of the company's headlong attempt to overtake Apple at any cost. A sweeping, insider account of the Korean's company's ongoing war against the likes of Google and Apple, *Samsung Rising* shows how a determined and fearless Asian competitor is poised to take on the giants of the tech world.
