## **12 useful df commands to check disk space in linux**

Mar 20 2022 6 aug 2021 the  
df command stands for disk  
filesystem it is used to get a  
full summary of available and  
used disk space usage of the  
file system on linux system  
using h parameter with df h  
will show the file system disk  
space statistics in human  
readable format means it gives  
the details in bytes megabytes  
and gigabyte

## difference between df where and df df in pandas Aug 25

2022 30 okt 2016 so the  
purpose of where is slightly  
different than filtering with  
brackets as it will give you the  
result with the same shape of  
the dataframe you run it  
against the goal is in the notes  
of the documentation the  
where method is an application  
of the if then idiom for each

element in the calling dataframe if cond is true the element is used

**python what is df values 1**

**stack overflow** Jul 24 2022 21

aug 2020 df is a dataframe

with several columns and

apparently the target values

are on the first column df

values returns a numpy array

with the underlying data of the

dataframe without any index or

columns names 1 is a slice of

that array that returns all rows

and every column starting from

the second column the first

column is index 0
